

From Januari 1st 2016 the Papillon-club have new rules regarding testing for PRA.

Testing for PRA has to be done with DNA testing.

Rules that apply for mating from January 1st 2016:

- Free/Clear can be mated with free/clear and carrier
- Carrier can only be mated with free/clear
- Affected are not allowed in breeding

The dog/dogs have to be tested before mating or be free from PRA through heritage.

It's recommended doing a regular eye-check when the dog have reached an age of 3-4 years.
